

for horses

Farrier's Hoof™ Topical Spray is designed to help maintain normal hoof conditions in horses. Spraying on a regular basis will help maintain normal hooves during damp or adverse weather conditions. Simultaneous feeding of Horses Prefer® Bio-Hoof™ is recommended.

Ferrier's Hoof will not stain the coat or irritate the skin.

USE RECOMMENDATIONS:

Shake well before using. Clean the hoof as thoroughly as possible and spray 2-3 times per day to saturate. After spraying, contain the horse in a clean dry area if possible. It is recommended to spray all the hooves. If condition persists, consult your veterinarian.
