CALCIUM DRENCH

Oral Nutritional Supplement

for Cattle, Goats & Sheep

Calcium Drench is a mineral supplement for use in fresh cows. It helps to maintain normal mineral and vitamin levels around freshening. Also suggested for sheep and goats.

FEEDING RECOMMENDATIONS:

CATTLE: Provide 200 ml at the first sign of freshening and another 200 ml 6 to 12 hours after calving. If the first feeding is missed, a post-calving feeding is still beneficial. Each one gallon container provides 19 feedings of 200 ml.

SHEEP & GOATS: Provide one ounce at the first sign of lambing/kidding and another one ounce 6 to 12 hours after birth. If the first feeding is missed, feeding following birth is still beneficial. Each 1 gallon container provides 128 one ounce feedings.

AVAILABLE SIZES:

20-000..... 1 gallon jug, 4 jugs per case
20-006..... 15 gallon pail

GUARANTEED ANALYSIS:

(Per 200 ml)

Calcium (min 12.5%)25g
Calcium (max 16.0%).....32g
