BENE-LYTE[™]

For Stressed or Transported Calves

for calves

Bene-Lyte[™] is an effervescent electrolyte treatment formulated specifically for calves. BENE-LYTE provides a balanced nutritional formula to maintain energy levels quickly. With advanced effervescent technology that mixes easily with water and does not settle out of solution and with blue coloring to track consumption.

MIX & FEED INSTRUCTIONS:

Mix one scoop [4 oz (113.5 g)] of Bene-Lyte to 2 quarts of 90°-110°F water in a feeding bucket. Allow the mixing action to subside before feeding. To minimize overflowing when bottle feeding, fill bottles 1/2 full before adding Bene-Lyte and add remaining water after mixing action subsides. For best results feed 2-4 hours after feeding milk or milk replacer.

AVAILABLE SIZES:

35901023.....22 lb Pail

USAGE:

When feeding to sick/stressed calves and during times of transfer, feed Bene-Lyte twice daily for 2-3 days. Providing Bene-Lyte in addition to the calf's regular schedule is recommended. Follow mixing and feeding directions carefully. Consult your veterinarian for advice in treatment of disease.

INGREDIENTS:

Lactose, Dextrose, Sodium Bicarbonate, Citric Acid, Sodium Chloride, Tricalcium Phosphate, Corn Starch, Artificial Flavors, Glycine, Potassium Chloride, Guar Gum, Sodium Aluminosilicate, Blue No. 1, Chitosan, Egg Protein, Turmeric.

Give Your Animals the Blue Ribbon They Deserve.
